

Supply Chain Management

Unleash the Power of Effective Supply Chain Decisions

April 06–09, 2026

City Campus, IBA Karachi

Program Overview

Unlock the Mysteries of Supply Chain Decision-Making

Learn powerful tools to influence actions and impact outcomes.

Revolutionize your operations. In this dynamic and collaborative learning environment, you'll explore the latest tools, techniques, and models for efficient – and effective – supply chain management.

How and why do managers make supply chain decisions?

Do they lead with their brains, their instincts – or a combination of the two?

This course helps you make sense of it all with research-driven insights, strategic frameworks, and practical tools.

Uncover the fundamental principles of supply chain decision-making, drawn from supply chain drivers, operations economics, financial footprints, and consumer behavior. Then, learn how to leverage these decision-making forces to drive desired actions and achieve your business goals.

Supply Chain Simulations and Modelling

Taught by leading authorities in management, strategy, marketing, and decision sciences, this program offers an interdisciplinary approach to managing supply chains and leading effective operations.

Faculty present state-of-the-art models and real-world local case studies on managing facilities, inventories, transportation, information, outsourcing, strategic partnerships, and more.

You will learn effective strategies for managing logistics and operating complex networks. You'll develop new skills to integrate your supply chain into a coordinated system and learn how to identify supply chain risks and design mitigation strategies. You'll gain practical tools for increasing service levels and reducing costs – and be inspired to redesign your operations for peak performance.

Course Outline

Link Between Supply Chain Strategy and Structure

- Identify drivers of supply chain performance
- Link the structure of these drivers to the success of supply chain strategy

Supply Chain Network Design

- Identify drivers of supply chain performance
- Link the structure of these drivers to the success of supply chain strategy

Purchasing and Sourcing in a Supply

- Discuss frameworks for outsourcing and extracting value from procurement
- Analyze strategies for pricing and auctions during procurement

Financial Supply Chains

- Physical & Financial Supply Chains (SC) Differences
- Creating efficiencies in Physical SC by focusing on financial aspects

Supply Chain Coordination and Integration

- Discuss causes of information distortion in the supply chain
- Identify suitable countermeasures to coordinate the supply chain

Managing Inventory in a Supply Chain

- Discuss mechanisms to reduce cycle inventory without hurting cost
- Identify approaches to reduce safety inventory without hurting product availability

Managing Risk in a Global Supply Chain

- Analyze sources of supply chain risk and explore strategies to help mitigate risk
- Incorporate reputational risk into the supply chain

Who Should Attend?

The Supply Chain Management course is ideal for anyone who wants to understand the key drivers of supply chain decision-making and learn tools to shape activities and influence business outcomes. It's specifically designed for:

- Senior and mid-level managers and consultants responsible for domestic and international supply chain and logistics systems.
- Operations, purchasing, inventory control, and transportation managers who want to ensure high customer service levels, low system-wide costs, and smooth production with as little inventory as possible.
- Managers who want to gain a deeper understanding of the role supply chains play in a company's overall business strategy.
- Managers, professionals, entrepreneurs working in supply chain, finance, procurement, operations/production, or distribution; government officials dealing with procurements, finance, monitoring, and improvement.
